

# Transitioning to Midwifery Models of Care

# Three Key Technical Guidances

# Why a global position paper on midwifery models of care?

*UN MMEIG 2023; UN IGME, 2023; UN IGME, 2023; Vogel et al., 2024; Kruk et al., 2018; Miller et al., 2016; Graham et al. 2016*

1

## High maternal and newborn mortality & morbidity

*and stillbirths, with life-long impacts on women, newborns and communities*

2

## Poor quality of care

*limited resources available, disrespectful care, overmedicalization*

3

## Transitioning to midwifery models of care

*Cost-effective strategy to improve women & newborns health outcomes*

4

## No common understanding

*of the concept of “midwifery models of care”*

# Global Position Paper

## Aim

Provide policymakers and healthcare leaders with comprehensive information about midwifery models of care

*-including evidence base, agreed definition, and guiding principles-*

to strengthen the quality of maternal and newborn care and ultimately contribute to improved outcomes for women and newborns

# Global Position Paper

## Collaborative process

### Authored and published by WHO

*Aligned with WHO documents & strategies*

### Contribution of 90+ individuals and partners

*Aligned with WHO documents & strategies*

### Supported by WHO STAGE :

*Strategic Technical Advisory Group of Experts for Maternal, Newborn, Child and Adolescent Health & Nutrition*

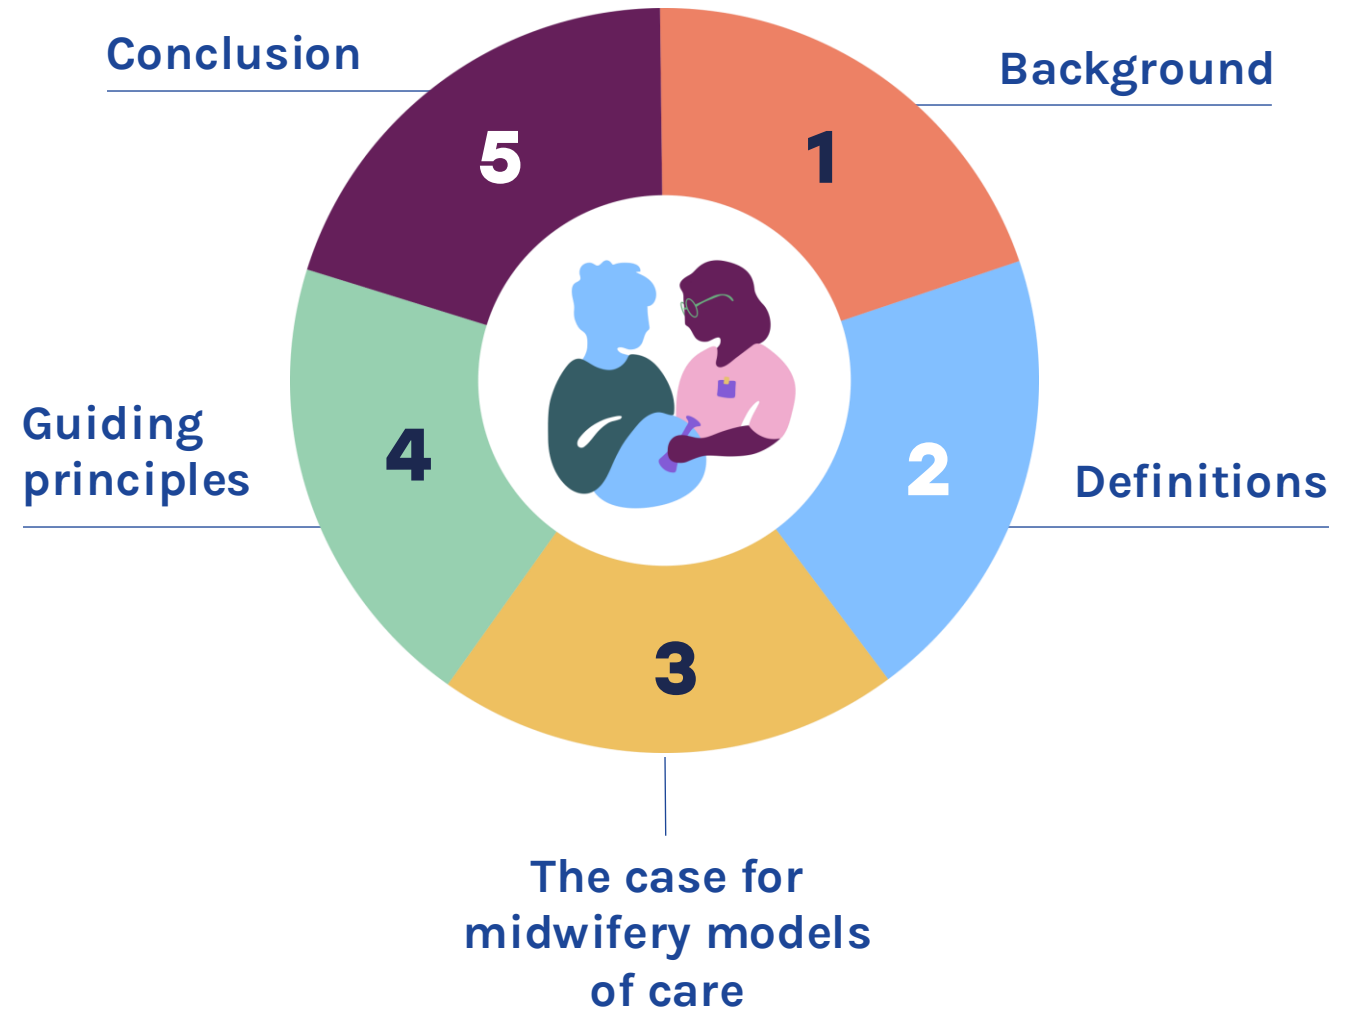

# Global Position Paper

## Content

# The Midwife: Definition and Scope of Practice

ISCO, 2008

Midwifery professionals plan, manage, provide and evaluate midwifery care services before, during and after pregnancy and childbirth. They provide delivery care for reducing health risks to women and newborn children according to the practice and standards of modern midwifery, working autonomously or in teams with other health care providers. They may conduct research on midwifery practices and procedures and implement midwifery education activities in clinical and community settings.

## Midwives have a broad scope of practice, including

- providing health education and information (health promotion) for women, partners and families;
- assessing the health and well-being status and needs of women and babies;
- screening for risk factors and at-risk behaviour;
- leading care planning in collaboration with women;
- promoting physiological pregnancy, labour, childbirth and postnatal period;
- providing essential newborn care and some special newborn care interventions;
- prescribing, dispensing and administering medicines or products; and
- ordering, performing and interpreting laboratory and/or imaging screening tests.

# The Case for Midwifery Models of Care

## Save Lives

save lives & improve health & well-being of women, newborns, partners, families and communities

## Humanize Care

humanize care and are responsive to the needs of women

## Advance Human Capital

Contribute to a better society and advance human capital in an uncertain world

## Economic Benefits

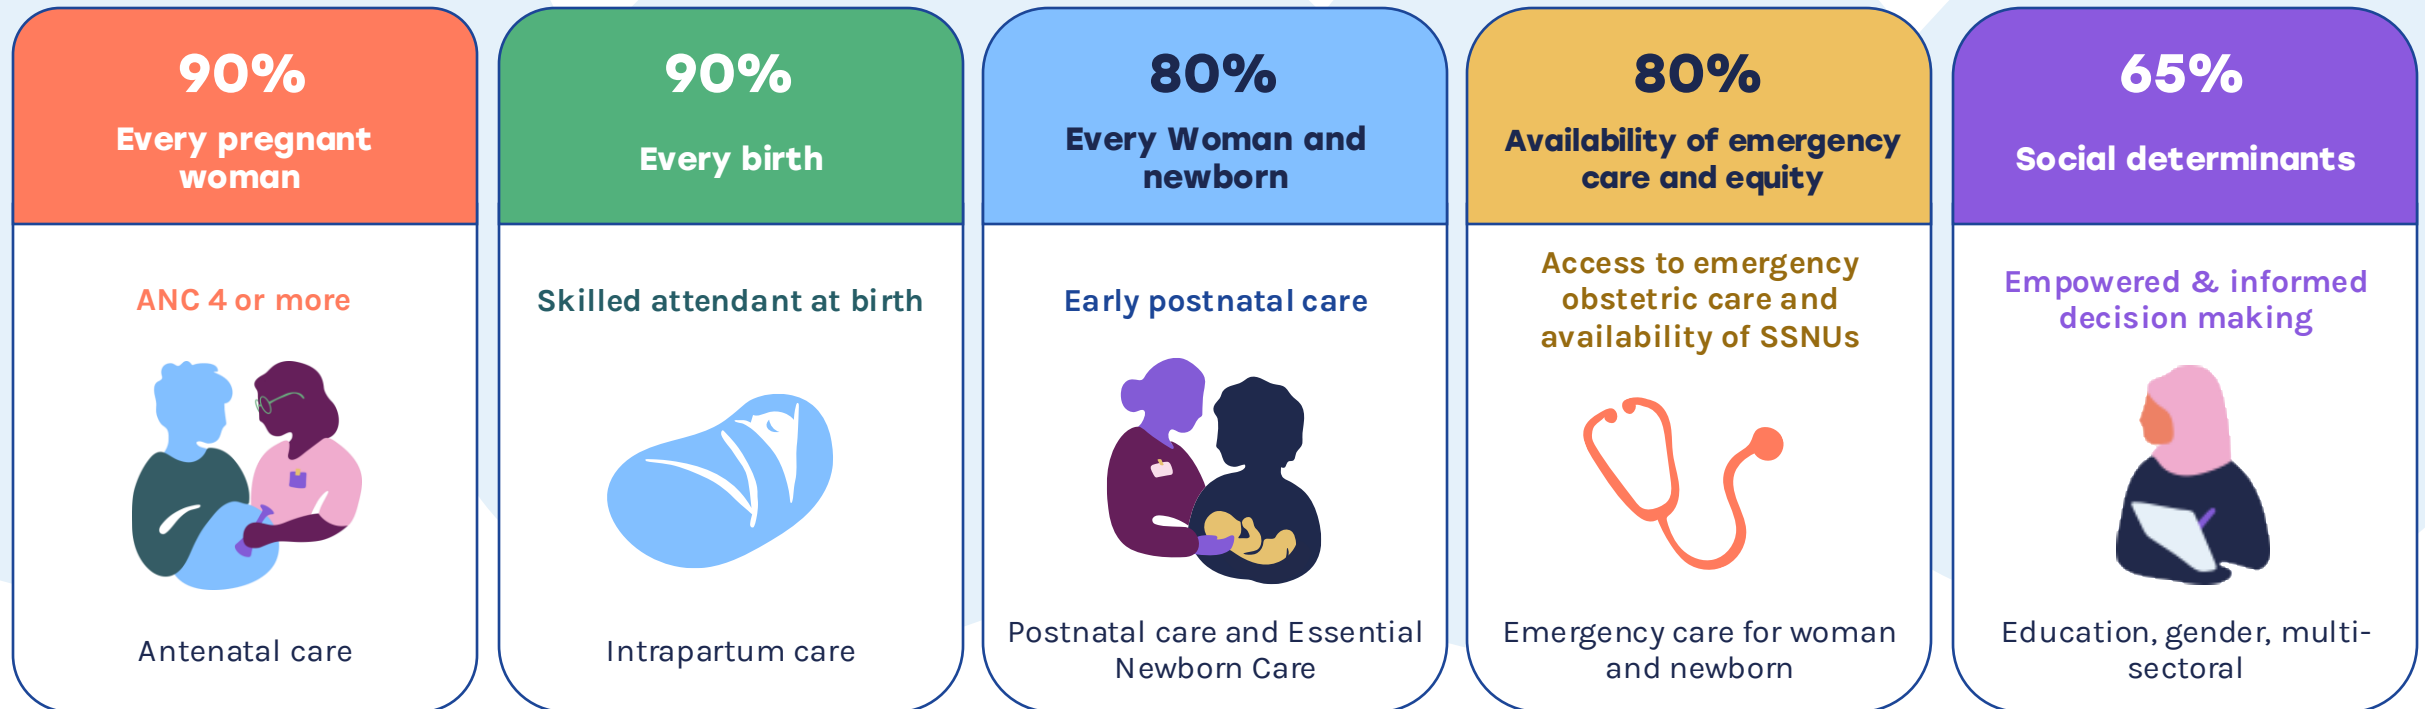

Are a cost-effective intervention with potential long-term economic benefits

# Every Woman, Every Newborn, Everywhere Targets and Milestones

*MMR global average < 70/100,000 live births SBR <12/1000 total births NMR <12/1000 live births*

Policy and plans, Investment, Response and Resilience, Quality of care, Health workforce, Medical commodities and devices, Data for Action Equity, Accountability, Research/innovation/knowledge exchange

# Guiding Principles

## Guiding Principles of Midwifery Models of Care

Equitable and human-rights-based care for all women and newborns

Person-centred and respectful care encouraging a trusting relationship and partnership

High-quality care, aligned with the midwifery philosophy

Care coordinated by midwives in all settings

Integrated and collaborative care

# Alignment with Primary Health Care (PHC)

## Principles of PHC

MMoC aligns with Primary Health Care principles including integrated, person-centered, and community-based services.

## Comprehensive Maternal Care

MMoC delivers comprehensive maternal and newborn care through midwives working in interdisciplinary teams.

## Supports Health System Reorientation

Transitioning to MMoC aids reorienting health systems toward PHC to achieve Universal Health Coverage.

## Enhanced Care Continuity

MMoC reduce fragmentation, enhance continuity, and bring services closer to communities.

# Equitable and Human Rights-Based Care

## **Equity in Maternal Health:**

Addressing disparities in maternal health outcomes, serving marginalized populations in the community

## **Women Empowerment:**

Women are involved in decision-making and feel empowered in making informed decisions

## **Ethical Imperative:**

Treating women with respect and dignity, ensuring choices are respected, bodily autonomy, non-discrimination, and dignity

# Community-Driven Approach

## Community Engagement

- Building trust and relationships
- Involving local stakeholders

## Accessibility

- Ensuring availability of midwifery services
- Overcoming geographical barriers

## Quality of Care

- Care provided by competent midwives
- Implementing evidence-based practices

# Midwifery Models of Care

## Why choose midwifery models of care?

- To save lives
- To increase vaginal birth rates
- To reduce assisted vaginal births and caesarean section rates
- To improve women's experience of care
- To reduce health inequities and reach universal health coverage
- To improve cost-effectiveness

Midwifery models of care provide women and newborns with care from an autonomous midwife, working as part of a team, throughout pregnancy, childbirth and the postnatal period.

- Woman- and newborn-centred care
- Provided by autonomous midwives within teams

- A trusting woman-midwife relationship and partnership
- Supporting healthy and physiological processes

- Quality and holistic care, based on evidence
- Provided before and during pregnancy, childbirth and the postnatal period

Fig 1. Key concepts related to midwifery models of care. Source: WHO, 2024 <sup>18</sup>

# Midwifery Models of Care

To showcase our guidance on transitioning to midwifery models of care

## Key Points:

**Models of Care:** Continuity of midwife care | Community-based | Birth centres | Private practice | Humanitarian settings

**Benefits:** Improves reproductive, maternal & newborn outcomes | Builds trust, continuity | Culturally acceptable | Early detection of complications

**Implementation Considerations:** Supportive policies | Adequate workforce | Health systems | Context adaptation (including humanitarian)

# Midwifery Models of Care: Definition

- A way to **optimise service delivery** to better meet the **needs of women and newborns** before, during and after pregnancy.
- **Quality care coordinated by midwives** who make **autonomous decisions across their full scope of practice**, as part of interdisciplinary teams.
- Best results achieved when care provided by the **same midwife or team of midwives** during pregnancy, birth and the postnatal period - **continuity of midwife care**.

# What are Midwifery Models of Care?

## Meeting Needs

Person-centered approach, tailored to individual needs, delivered within well-functioning health systems

## Quality Care

Midwives making autonomous decisions across their full scope of practice

## Relationship-based

Trust and respect, ensuring personalized care for every woman and newborn.

## Natural process

Using interventions only when necessary. Through effective referral systems.

# Core Service Delivery Elements

- 1 Care recipients** Women and Newborns
- 2 Package of midwifery services** Reproductive, maternal and newborn care services.
- 3 Continuum** Pre-pregnancy, pregnancy, intrapartum and post partum period
- 4 Main care provider** Midwives providing and coordinating care.  
Midwives making their own decisions within their scope of practice.
- 5 Approach to care** Based on the midwifery philosophy of care:  
Person-centered, relationship and partnership between midwives and women, optimization of physiological, biological, psychological, social and cultural processes - Use of interventions only when indicated

# Service Delivery Platforms

These platforms can be:

- Community-based settings
- Hospital-based settings
- Public and private sectors, including public–private partnerships
- Facilities in resource-limited environments, or humanitarian and crisis settings

# Midwifery Models of Care

- Continuity of midwife care models
- Birth centres
- Community-based models
- Private practice models
- Models for humanitarian and crisis settings

# Continuity of Midwife Care Models

**Definition:** One midwife, or a small team of midwives, provides care throughout pregnancy, child birth, and the postpartum period.

## Key Elements:

- Builds strong trust and rapport between the woman and midwife.
- Allows early detection of complications (e.g., anemia, prolonged labour, PPH risk factors).
- Promotes woman-centered and culturally sensitive care.
- Facilitates continuity of documentation and care planning.

**Benefits:** Associated with lower intervention rates, higher maternal satisfaction, and improved outcomes for both mother and baby.

## Considerations for Implementation:

- Requires supportive policies, adequate staffing, and structured referral pathways.

# Continuity of Midwife Care Models

*Cochrane systematic review*

**Continuity of midwife care  
vs other model of care**

## **Positive care experience for women**

*High level of overall satisfaction with care*

## **Improved maternal health outcomes**

*More vaginal births, less C-sections and instrumental births*

## **Cost-savings**

*For antenatal and postnatal care*

# Birth Centres

**Definition:** Standalone or hospital-affiliated centres where low-risk women can receive midwifery care.

## Key Elements:

- Focus on physiological birth, reducing unnecessary interventions.
- Provide a homelike environment for labour and birth.
- Can include postnatal care and parenting support.

**Benefits:** Birth centres improve maternal satisfaction and are cost-effective while maintaining safety through clear referral protocols.

## Considerations for Implementation:

- Effective when integrated into national health systems and referral networks.

# Community-Based Models

**Definition:** Outreach and care provided in the community or home, often for underserved or rural populations.

## Key Elements:

- Home visits, local clinics, mobile health teams.
- Promotes access for women with transportation or financial barriers.
- Strengthens preventive care, early risk detection, and follow-up.

**Benefits:** Community-based midwifery may reduce inequities in maternal health.

## Considerations for Implementation:

- Requires community engagement, supervision, and linkages with higher-level care facilities.

# Models for Humanitarian and Crisis Settings

**Definition:** Adapted, flexible, mobile midwifery models in emergencies or resource-limited environments.

## Key Elements:

- Mobile clinics, temporary birthing spaces, community outreach.
- Focus on essential interventions, including PPH prevention and basic emergency care.
- Collaboration with NGOs, UN agencies, and local health authorities.

**Benefits:** Midwifery services in crisis settings save lives and maintain essential reproductive health services.

## Considerations for Implementation:

- Supplies, medications, and equipment must be portable and readily available.
- Midwives require competencies in emergency obstetric care.
- Cultural sensitivity and security considerations are essential.

# Purpose and audience of the implementation guidance

## **Purpose:**

Practical guidance for  
transitioning to midwifery  
models of care

## **Audience:**

Ministries of Health, programme  
implementers, policymakers,  
educators, and advocates

# International Scope of Practice

| Components         | Description  |
|--------------------|--|
| Essential Pillars  | Foundational elements for sustainable transition (e.g., governance, finance) |
| Strategic Planning | Step-by-step guidance for planning and operationalization                    |
| Transition Areas   | Eight critical focus areas for systems change                                |
| Assessment Tool    | Framework to assess progress across five phases and eight domains            |
| Country Examples   | Real-world case studies showcasing implementation in diverse settings        |

# Essential Pillars for Transition

## Political commitment and funding

Drives leadership, policy  
reform, and strategic  
alignment

## Governance

Enables long-term  
investment in  
workforce,  
infrastructure, and  
services

## Partnership

Fosters cross-sector  
alliances and  
community ownership.

## Sustainability

Empowered &  
informed decision  
making

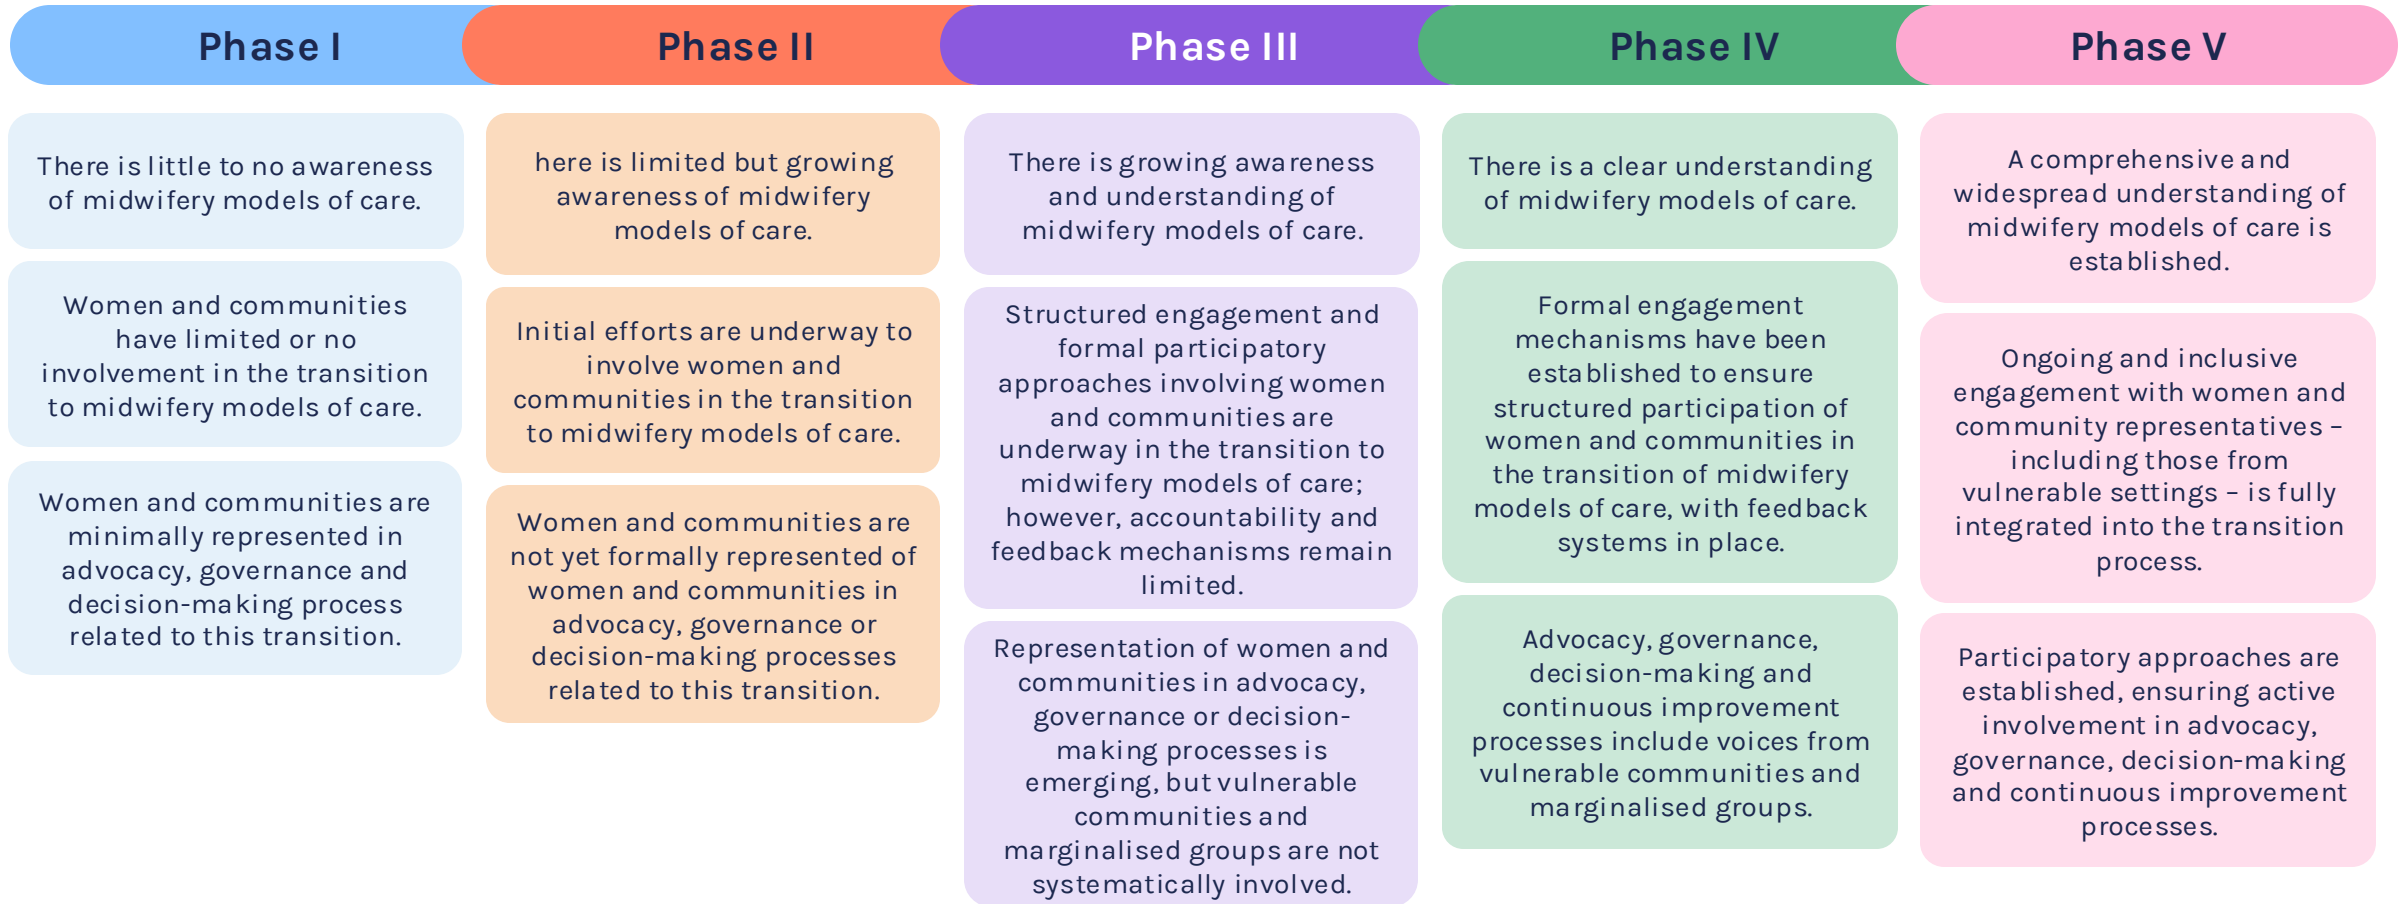

# Transition Framework Assessment Tool

| Transition Area                   | Phase 1 | Phase 2 | Phase 3 | Phase 4 | Phase 5 |
|-----------------------------------|---------|---------|---------|---------|---------|
| Women and community engagement    |         |         |         | ✓       |         |
| Service delivery                  |         | ✓       |         |         |         |
| Interprofessional collaboration   |         | ✓       |         |         |         |
| Leadership and research           | ✓       |         |         |         |         |
| Policy and regulatory environment |         |         |         | ✓       |         |
| Education and CPD                 |         |         | ✓       |         |         |
| Health Workforce strategies       | ✓       |         |         |         |         |
| Health system environment         |         | ✓       |         |         |         |

# Women and Community Engagement

# Interprofessional Collaboration

## Phase I

Collaboration among midwives, obstetricians, paediatricians, nurses and other health workers remains limited or minimal.

Decision-making remains hierarchical, with midwives operating under the supervision of medical doctors, including obstetricians.

## Phase II

Early collaboration and relationship-building efforts are taking place through informal joint initiatives among midwives, doctors, nurses and other health workers.

Initial steps are being taken towards more equitable decision-making. However, midwives largely continue to operate under the supervision of medical doctors including obstetricians, who often retain authority over clinical decisions, including those within the midwifery scope of practice.

## Phase III

Collaboration has been strengthened through structured interdisciplinary initiatives.

Shared decision-making is increasing; however, the process remains largely hierarchical, with midwives continuing to work under the supervision of medical doctors, including obstetricians.

## Phase IV

Midwives demonstrate autonomy in decision-making within their scope of practice, while maintaining interprofessional collaboration.

They maintain clear, respectful and consistent communication with other health professionals to ensure coordinated care and positive health outcomes.

## Phase V

Collaboration is fully embedded across the health system, characterised by equal partnerships, continuous interprofessional education, formal networks of care and effective conflict resolution mechanisms.

A culture of trust and shared leadership is maintained, underpinned by an ongoing commitment to continuous quality improvement.

# Midwifery Accelerator

# Three pillars and seven accelerators to align efforts, optimize investments & scale-up Midwifery Models of Care

## Commit and Invest

01

Strengthen policy and regulatory frameworks

02

Increase global and domestic investment

## Educate, Deploy, Retain

03

Invest in quality education and professional development of midwives

04

Deploy midwives strategically through data-driven workforce planning

05

Retain midwives by creating a safe, supportive environment and accountable workplace

## Advocate and Empower

06

Empower midwives to lead and strengthen coalitions

07

Elevate advocacy and community engagement

6 initial champion countries leading the effort:

**Bangladesh, Côte D'Ivoire, Nepal, Rwanda, Sierra Leone and Zambia**

# Amplifying Implementation

## Programmatic alignment and complementary efforts

- Coordinated technical support to countries through EWENE
- National investment cases

## Tracking progress

- Against the SDGs and global EWENE coverage and quality targets
- State of the World's Midwifery reports

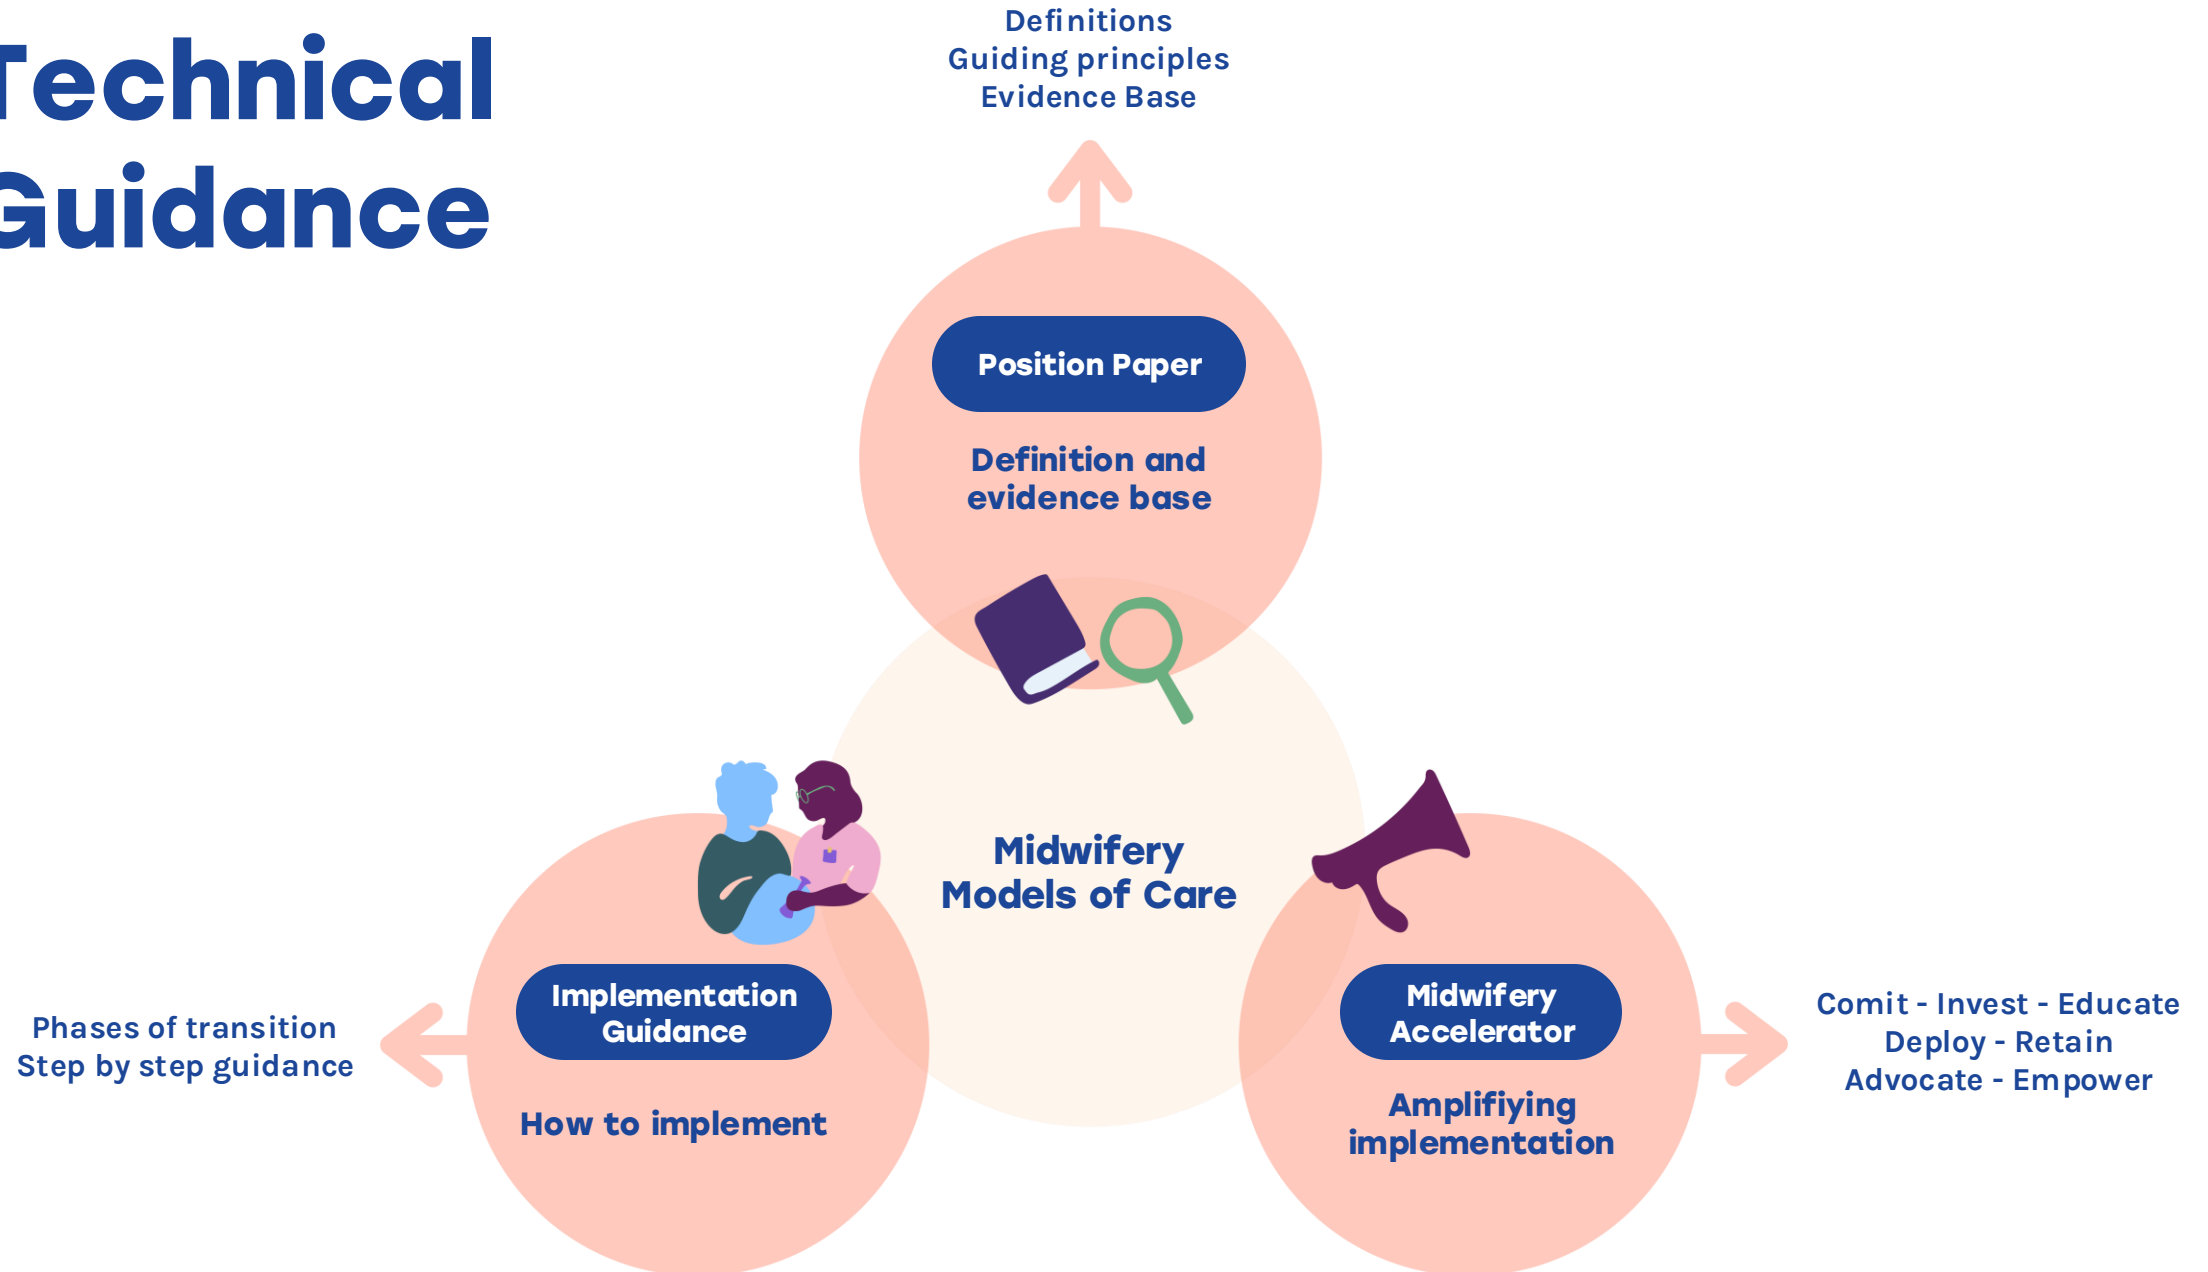

## Advocacy and accountability

- Country, regional and global level including annual WHA breakfast to keep the drumbeat
- Global communications
